

HARDWOOD MANTLE COLUMNS
A quality stain grade column used in mantle applications and manufactured from select hardwoods such as Red Oak, Cherry, Maple and Poplar. This column incorporates either a tapered shaft with a true architectural entasis or a non-tapered shaft for a contemporary appearance. The classic hardwood column may be purchased with or without a bead molding, and is available in both a plain or fluted shaft.

A Crown mantle column is the essential component in providing natural beauty and pleasing charm to any mantle installation.
